Immune Health Essentials

The immune system is a complex network of cells and proteins that is the body's first line of defence against infections. The gastrointestinal tract plays host to around 70% of our immune cells, meaning that the health of the gut and the health of the immune system are closely interwoven.

Numerous studies have demonstrated the important role of nutrition in supporting a healthy immune system function.

Designs for Health offers a wide range of products to support optimal immune function and health for your patients.
